

BEING ME

Documentary Photography

Introduction

SOCIAL DISCONNECTION

The various aspects of the human negative emotional condition, from the drama of self isolation and the subsequent deep depression that comes from self isolation. These problems are caused by the following symptoms. Feelings of being alone, sadness, dark moods, guilt, self- analysis , and even a numbness and loss of interest and excitement to see family and friends, do activities or create things.

However, these constant negative feelings are originally caused by an inherited gene, which means they're passed from parent to child. The parent's mental illnesses or medication side-effects during pregnancy or result in psychological flashbacks of fear, mistrust, severe anxiety, or trauma, which we now recognize as PTSD (Post-traumatic stress disorder).

These conditions of mental illness or behavioural disorders are a disturbances in a person's life, it affects more than 280 million people of all ages, which makes it difficult to lead an ordinary life, and some people can be driven to suicidal tendencies. It's not a choice of living, but they are victims of the unpredictable future. And still widely misunderstood by others.

Mental illnesses list;

- Anxiety disorder • Depression • Schizoaffective disorder
- Obsessive-compulsive disorder • Mood disorder • Personality disorder • Eating disorder • Psychosis • Specific phobia • Post-traumatic stress disorder
- Schizophrenia • Panic disorder • Bipolar disorder
